

INTERNSHIP REPORT PRESENTATION

Data Science Internship

at Avani Eco Solutions Pvt. Ltd.

SUBMITTED BY

Avanish Tiwari

ROLL NUMBER

2410030318

COURSE

B.Tech CSE

DEPARTMENT

Computer Science

UNIVERSITY

IILM University, Greater Noida, U.P.

Candidate's Declaration

I, Avanish Tiwari, Roll No. 2410030318, declare that the internship report titled “Data Science Internship at Avani Eco Solutions Pvt. Ltd.” has been completed by me in partial fulfilment of the requirement for the degree of Bachelor of Technology in Computer Science and Engineering at IILM University. This work is my own and has not been submitted elsewhere for any other degree or diploma.

Acknowledgement

I sincerely thank the HR Department and the entire team at Avani Eco Solutions Pvt. Ltd. for the opportunity to work as a Data Science Intern and for their guidance throughout the internship. I also thank the School of Computer Science and Engineering, IILM University, for the platform and encouragement to undertake this internship, and my parents for their support.

Organization Profile

Avani Eco Solutions Pvt. Ltd.

Focus

Sustainable & eco-friendly solutions — solar energy and green technology

Address

A824 T3, NX-ONE, Tech Zone IV, Amrapali Dream Valley, Greater Noida, UP

Mission

Promoting renewable energy adoption and environmentally responsible practices

Digital Presence

Active website and online channels showcasing products, services and sustainability initiatives

Internship Details

POSITION

Data Science Intern

DEPARTMENT

Research & Development

DURATION

30 Days

MODE

Work from Office

REPORTING DATE

01 July 2026, 10:00 AM

WORKING HOURS

Mon–Sat, 10:00 AM–5:00 PM

REPORTING MANAGER

HR Department

STIPEND

₹10,000 per month (performance-based)

Problem Statement

As a solar EPC solutions provider, Avani Eco Solutions generates large volumes of operational data — covering vendor performance, procurement, project timelines and site progress. Without structured analysis, this data remained under-utilised for identifying delays, inefficiencies and improvement areas across ongoing projects.

There was a need for a data-driven approach to organise, analyse and visualise this information so that project teams could make faster, better-informed decisions.

30

Days of hands-on
exposure

R&D

Department of
placement

Project Objectives

1

Gain practical exposure to data analysis, Python programming, and data visualisation in a live organisational environment.

2

Assist in preparing project documentation, reports, work schedules, and progress updates for solar EPC projects.

3

Support procurement and vendor coordination by analysing material availability, delivery timelines, and supplier data.

4

Monitor project timelines using data to help ensure work is completed as per quality and safety standards.

5

Assist in preparing BOQs, project records, and other technical documentation using data-driven methods.

6

Understand the workflow involved in translating raw project data into actionable business insights.

Scope of the Internship

The scope of the internship was limited to data-support activities for ongoing solar EPC projects, rather than independent research or production system development.

WITHIN SCOPE

Data analysis for vendor and procurement tracking

Python-based scripts for basic reporting tasks

Data visualisation of project timelines and progress

Coordination support with site and client teams

OUTSIDE SCOPE

Independent deployment of production ML models

Backend infrastructure or system architecture changes

Full redevelopment of internal data systems

Unsupervised client-facing decision making

Technologies & Tools Used

Python

Core language for data analysis, scripting and automation

Data Visualisation

Charting tools used to present project and vendor data clearly

Spreadsheets

Structuring BOQs, project records and procurement data

Documentation Tools

Preparing reports, work schedules and progress updates

Communication Platforms

Coordinating with vendors, clients and internal teams

Project Tracking

Monitoring timelines against quality and safety standards

Roles & Responsibilities

Assisted in planning, execution, and monitoring of solar EPC projects

Coordinated with vendors, suppliers, and site teams for timely execution

Prepared project documentation, reports, work schedules, and progress updates

Supported procurement activities by tracking material availability and deliveries

Coordinated with clients, contractors, and internal departments

Monitored project timelines against quality and safety standards

Assisted in preparing BOQs, project records, and technical documentation

Conducted site visits when required to collect and record site information

Methodology

Expected Outcomes

Improved project decision-making through structured data analysis and reporting

Hands-on experience with Python for real-world data analysis and visualisation

Practical understanding of solar EPC project workflows and documentation

Stronger coordination skills across vendors, clients, and internal teams

A working knowledge of translating raw operational data into actionable insights

Professional experience in a live organisational setting ahead of full-time employment

Conclusion

The 30-day internship as a Data Science Intern at Avani Eco Solutions Pvt. Ltd. provided valuable exposure to applying data analysis, Python, and visualisation techniques within a live solar EPC project environment. Working closely with the R&D and project teams offered practical insight into how data can support procurement, documentation, and project monitoring decisions in a growing renewable-energy organisation.

This experience strengthened both technical and professional skills and provided a solid foundation for future work in data science within an industry context.

Thank You
